

DraftRight — Company Plan

A software company built around one finished product

Prepared for Dad · 24 May 2026 · FX rate 25,000 VND/USD

Year-1 capital ~\$4,000 · then ~\$1,600/yr · 1 person

1 What is DraftRight?

A writing assistant. You highlight any text, choose a tone, and DraftRight instantly rewrites it — clearer, more professional, or in whatever style you need. It works inside email, messaging, documents, social media — anywhere you type.

YOU WROTE

"hey can u send me the report asap
thx"

DRAFTRIGHT · PROFESSIONAL

"Hello, could you please send me the
report at your earliest convenience?
Thank you."

Professional

Friendly

Concise

Persuasive

Polite

Fix grammar

Translate

It runs everywhere — and includes a custom keyboard, so it even works on phones inside other apps:

macOS

Windows

Linux

iPhone

Android

Web

Custom keyboard

2 Who uses it & why it's different

Professionals writing emails, proposals, customer replies.

Students polishing essays and applications.

Non-native English writers who want to sound fluent and correct.

Vietnamese users — built-in Telex keyboard that types Vietnamese better than the defaults.

Why people would choose us over free built-in AI (Apple / Google):

Works on **every device**, not just the newest phones.

More tones & control than the built-in tools.

Privacy — can run on our own private AI, data not sent to big tech.

The **Asian-language keyboards** — a real advantage no big competitor offers.

Language roadmap — our growing moat. We start with Vietnamese, then add the major Asian languages. Each one opens millions of new users that Apple/Google serve poorly:

Vietnamese · Live

Japanese · In progress

Korean · Planned

Chinese · Planned

...more later

3 How the company makes money

Subscription software (SaaS). Free tier to attract users; paid plan unlocks everything. Customers pay **every month** — recurring revenue that stacks up over time.

Plan	Price	What you get
Free	\$0	A few rewrites per day — to get people hooked
Pro	~\$5.99 / month	Unlimited rewrites, all tones, all devices

Cost to serve a customer

~\$0

the AI runs on a free server
— no per-use cost

Gross margin

~90%

almost every payment is
profit

Break-even

**~25
customers**

covers all monthly running
costs

Because the product is already built and costs almost nothing to run, **once we pass ~25 paying customers, nearly everything after that is profit.**

4 The company & the goal

The company: a Vietnamese single-member LLC that owns and operates DraftRight. Run by me (1 person) for now.

Mission: help anyone write clearly and confidently — in any tone, in any language, on any device.

By end of Year 1

**125 paying
+ 2,500 free**

prove people pay

By end of Year 2

~300 paying

profitable, ~\$11k/yr profit

By end of Year 3

~600 paying

~\$26k/yr profit, hire help

5 Investment

Year 1

~\$4,000

100M đ · includes strong marketing

Each year after

~\$1,600

40M đ · running costs

Headcount

1 person

me — build + operate + support

Item	Year 1 (đ)	Each year after (đ)
Company registration + digital signature + e-invoice	4,300,000	2,300,000
Business licence tax	0 (exempt)	2,000,000
Accounting (12 months)	7,200,000	7,200,000
Domain + email	1,000,000	1,000,000
Apple Developer	2,500,000	2,500,000
Server (Oracle free tier)	0	0
Claude Max 20x (AI coding tool — faster build)	60,000,000	15,000,000
Marketing	15,000,000	8,000,000
Contingency buffer	10,000,000	2,000,000
TOTAL	~100,000,000	~40,000,000

Strategy: invest more in development speed (Claude Max 20x) to ship Japanese/Korean sooner, and spend less on paid marketing — relying on the app stores, word of mouth, and the language features themselves to attract users. Trade-off: **slower user growth in Year 1**, but a stronger product with more languages.

6 Launch plan: 6 free months first

For the first 6 months the app is **free for everyone** — to attract users, gather reviews, and fix every bug. We start charging in Month 7, when there's already a base of users to convert.

Free users by end of Month 6	Paying when we switch on (M7)	End of Year 1
1,000	~20	~50
2,500 (base case)	~50	~125
5,000 (target with strong marketing)	~100	~250

The number of free users at Month 6 decides all the revenue. That is the entire focus of the first half-year.

Note on the lower marketing budget: with ~15M đ marketing (instead of 45M), expect the **conservative-to-base range** (~1,000–2,000 free users) in Year 1 — slower growth. In return, the heavier coding budget ships **Japanese & Korean sooner**, which widens the market and lifts Year 2–3.

7 Revenue — charging from Month 7 (base case)

Month	Status	Paying users	Revenue/month (₹)
1–6	Free launch	0	0
7	Payment ON	50	6,250,000
8		70	8,750,000
9		88	11,000,000
10		103	12,875,000
11		115	14,375,000
12		125	15,625,000
Total Year 1 revenue			~69,000,000 (~\$2,760)

8 3-year profit (Revenue – Costs)

Base case. Year 1 is a planned loss — we front-load marketing and give 6 free months.

■ Year 1 ■ Year 2 ■ Year 3

Scenario	Year 1	Year 2	Year 3
● Conservative	-72M	+50M	+150M
● Base	-31M	+280M	+650M
● Optimistic	+40M	+940M	+2.28B

9 Cash flow & payback

- **Year 1:** cash flow **negative** — \$4,000 in, no revenue for 6 months. Normal for a software launch.
- **Month 9–10:** operating break-even (~25 customers cover monthly costs).
- **Month 16–18:** the full \$4,000 is paid back.
- **From Year 2:** steady, growing profit — customers keep paying monthly and new ones join.

10 Risks (straight talk)

 **Getting users is the hardest part.** The product is finished; the challenge is marketing, not building.

 **Free built-in AI exists** (Apple, Google). Our edge: every platform, more control, privacy, the Vietnamese keyboard.

 **Intellectual property:** I built this while employed and my employer doesn't know. **We must check with a lawyer (~\$50–100) before transferring ownership into the company.**

 **Solo founder** — one person doing everything; burnout risk.

Maximum downside: lose the ~\$4,000 capital. No loans, no debt.

In one paragraph: DraftRight is a finished AI writing app that works on every device and earns money through a monthly subscription. The product costs almost nothing to run, so the profit margin is ~90%. We invest ~\$4,000 to register the company, give the app away free for 6 months to build users, then start charging. Year 1 is a small loss; the capital comes back around mid-Year 2; from there it earns steadily and grows. The most we can lose is the \$4,000 — with no debt.
